

How to Add Geo Code to Google Forms

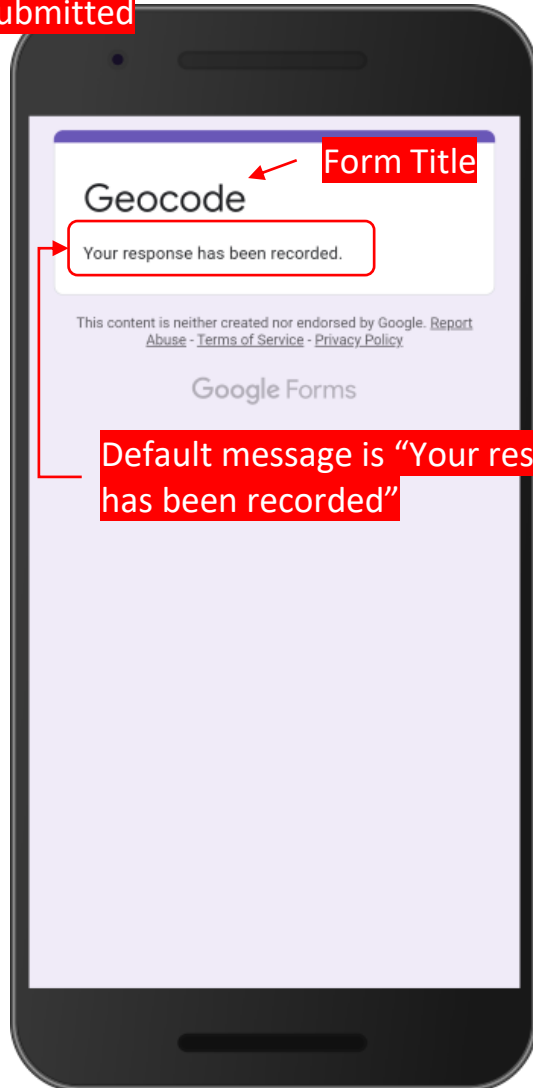

Add Info on Latitude, Longitude and Address (Street Name and Number, City, State, ZIP Code, Country) of a Device submitting Google Forms

April 2024

maxi

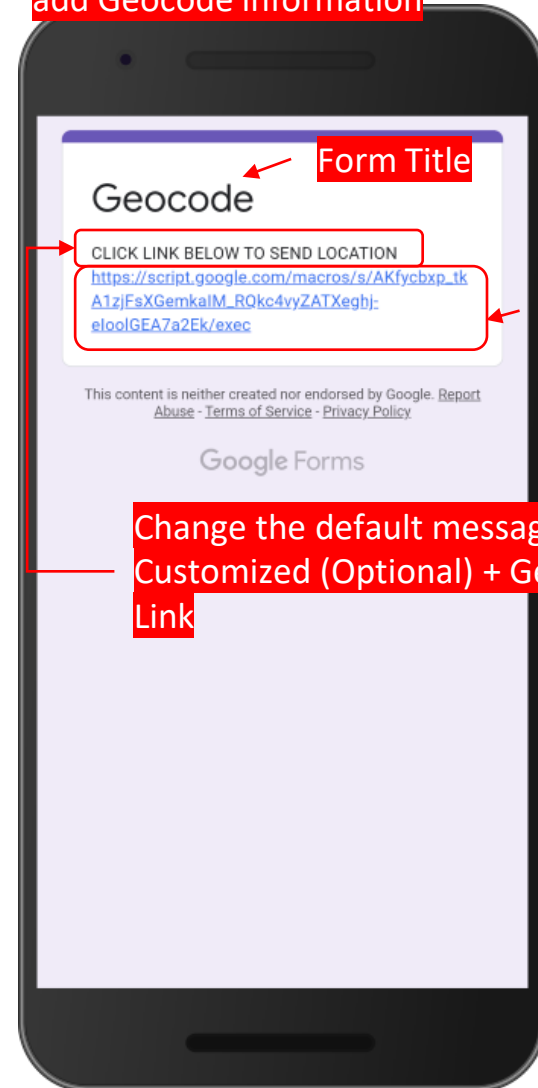

Google Form Submit Confirmation Message

Confirmation page is displayed after form is submitted

Default message is "Your response has been recorded"

Link in Confirmation Message to add Geocode information

Click the link to add Geocode

Change the default message to Customized (Optional) + Geocode Link

Geocode for Google Forms

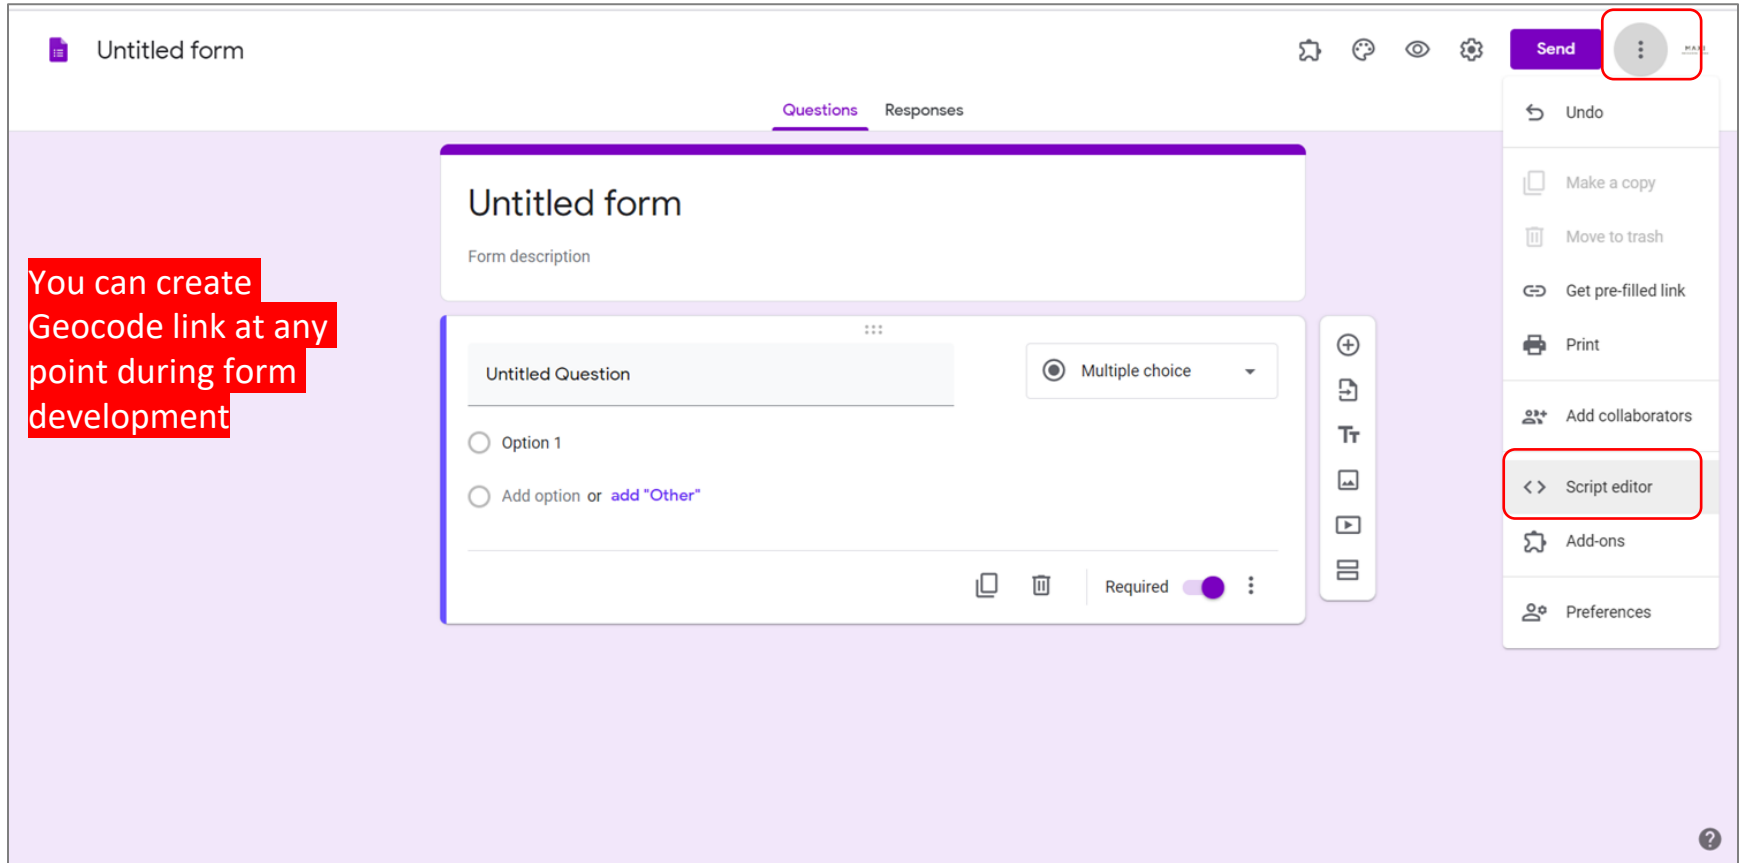

- Geocode information of the device submitting Google Forms can be added to your Google Forms response data spreadsheet. As is Google Form, the Geocode information is free.
- By clicking the Geocode link, the response data spreadsheet will have the following three additional columns

	A	B	C	D	E
1	Timestamp	Location	GeoStamp	GeoCode	GeoAddress
2	5/17/2018 23:11:44	Yes	05/17/2018 23:11:49	-6.2576675999999996,106.8533283	Jl. Rawajati Barat III No.7A, Rawajati, Pancoran, Kota Jakarta Selatan, Daerah Khusus Ibukota Jakarta 12750, Indonesia
3	5/17/2018 23:18:32	Yes	05/17/2018 23:18:37	37.747464105958976,-122.4184396093321	3119 Mission St, San Francisco, CA 94110, USA
4	5/17/2018 23:21:02	Yes	05/17/2018 23:21:07	-6.8971377,107.6165972	Jl. H. Wasid No.23, Lebakgede, Coblong, Kota Bandung, Jawa Barat 40132, Indonesia

How to Create Geocode Link

1. Go to Script Editor

- In your Google Form form, go to Script editor
- Script editor is only available when you open Google Form from Laptop/PC

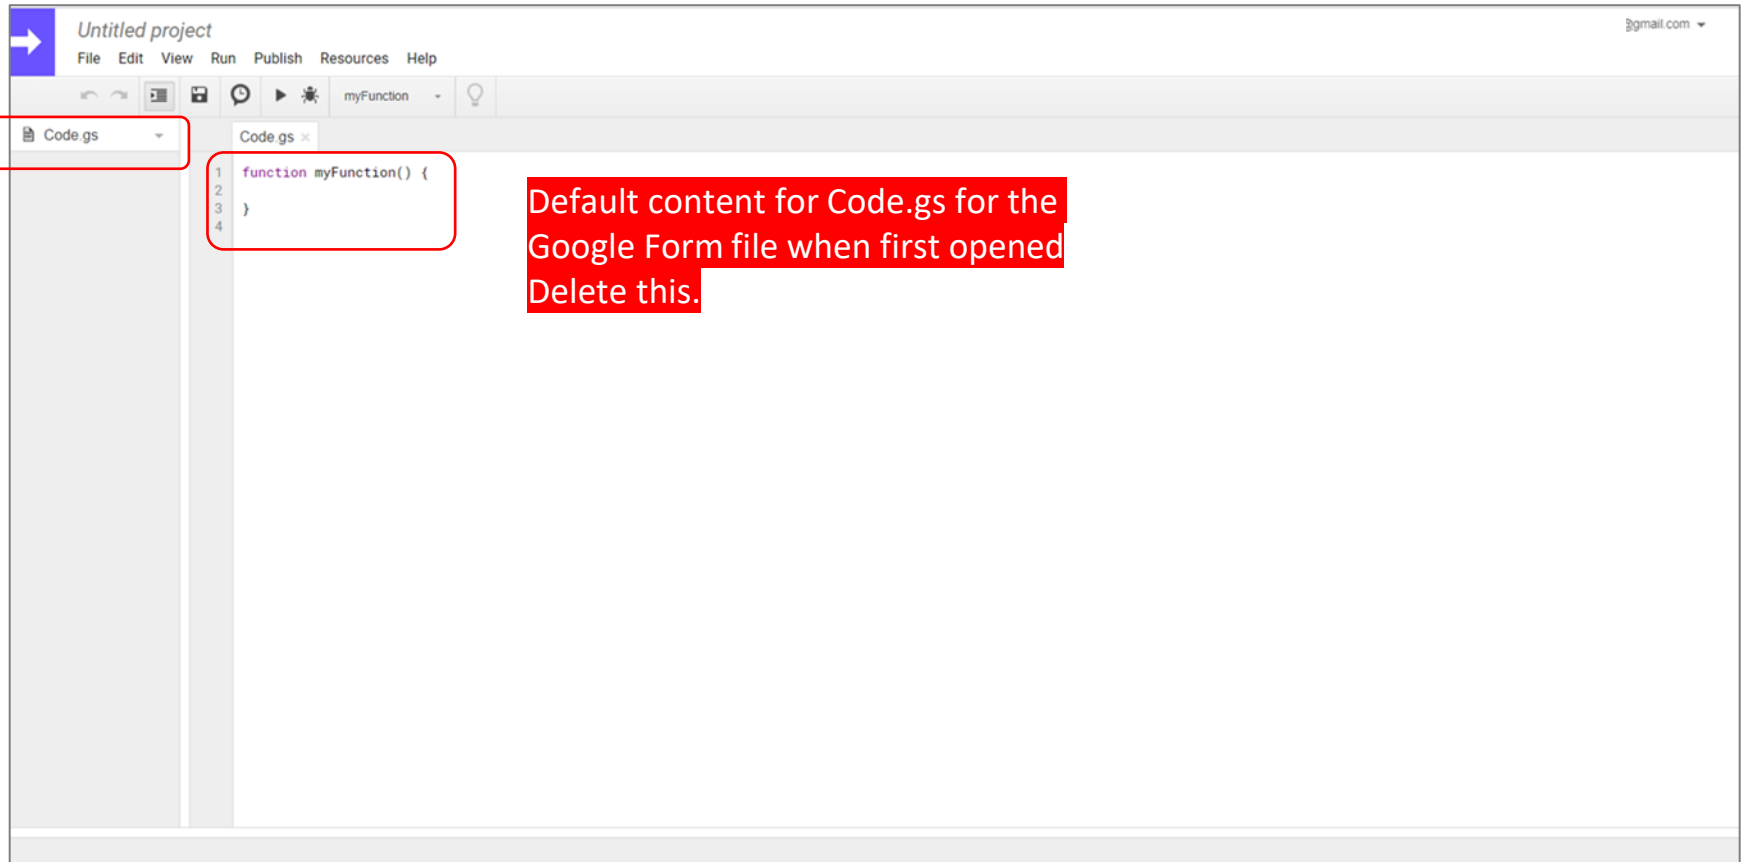

The screenshot displays the Google Forms editor interface. At the top, the title 'Untitled form' is visible. The main area shows a form with a title 'Untitled form' and a description 'Form description'. Below this is a question titled 'Untitled Question' with a 'Multiple choice' type. The question has two options: 'Option 1' and 'Add option or add "Other"'. The 'Required' toggle is turned on. On the right side, there is a 'Send' button with a three-dot menu icon next to it. This menu is open, showing options like 'Undo', 'Make a copy', 'Move to trash', 'Get pre-filled link', 'Print', 'Add collaborators', 'Script editor', 'Add-ons', and 'Preferences'. The 'Script editor' option is highlighted with a red box. A red text box on the left side of the form says 'You can create Geocode link at any point during form development'.

You can create Geocode link at any point during form development

How to Create Geocode Link

2. Script editor opened

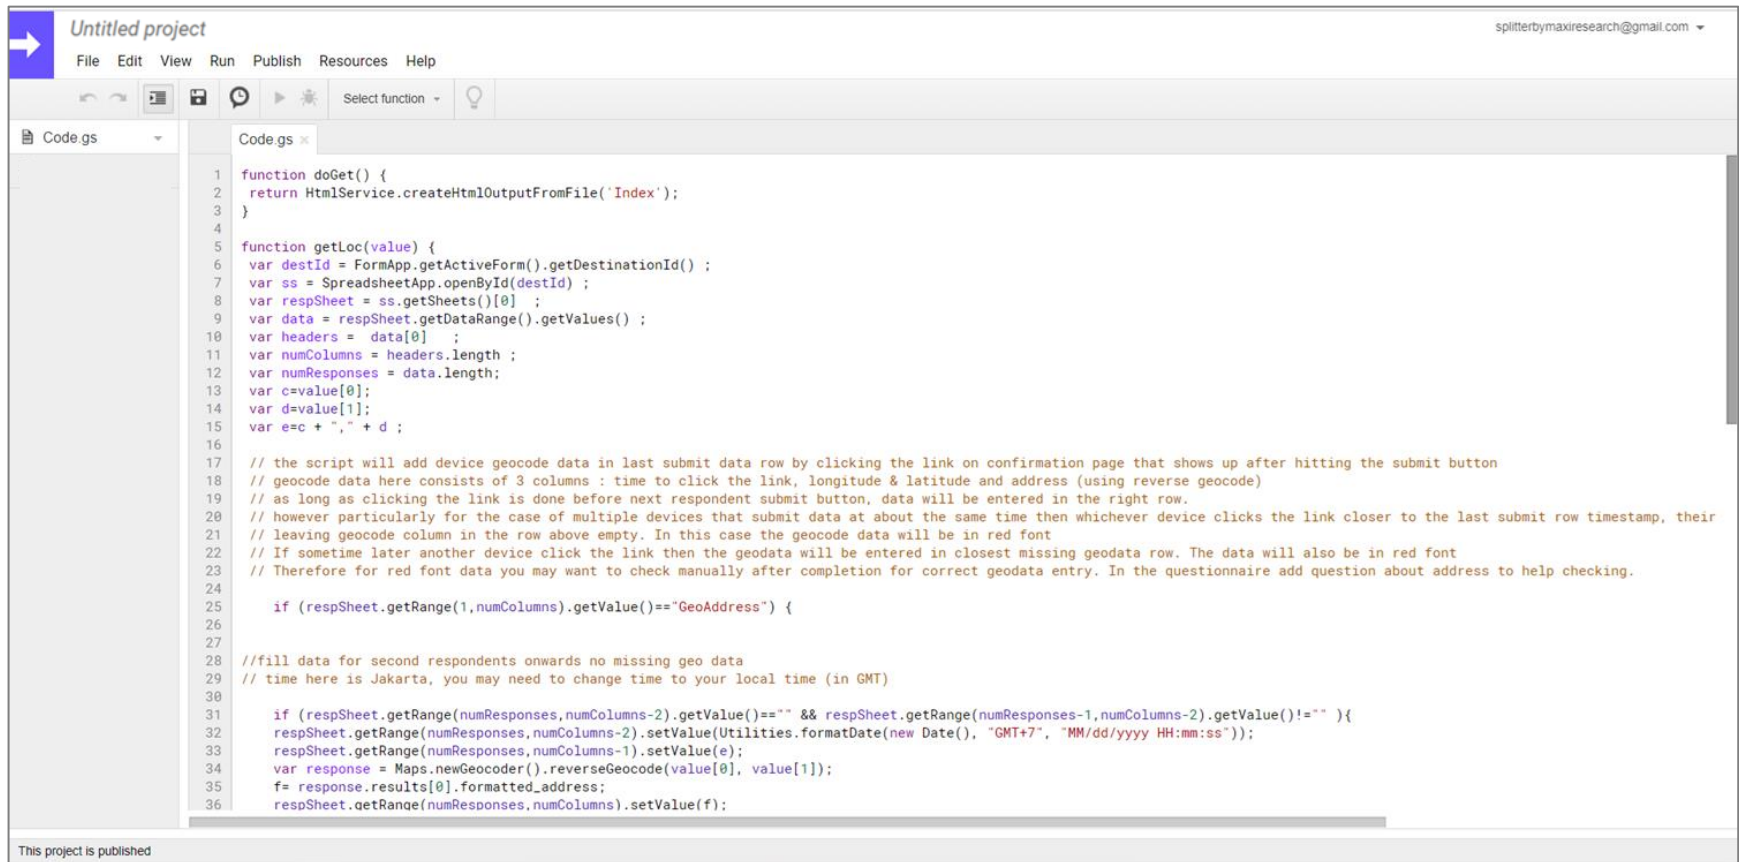

- Once opened, the script editor already has Code.gs

How to Create Geocode Link

3. Copy and Paste script to Code.gs

- Geocode full script available in Appendix
- Copy the script on Code.gs part in the Appendix and paste them to your Code.gs.

```
1 function doGet() {
2   return HtmlService.createHtmlOutputFromFile('Index');
3 }
4
5 function getLoc(value) {
6   var destId = FormApp.getActiveForm().getDestinationId();
7   var ss = SpreadsheetApp.openById(destId);
8   var respSheet = ss.getSheets()[0];
9   var data = respSheet.getDataRange().getValues();
10  var headers = data[0];
11  var numColumns = headers.length;
12  var numResponses = data.length;
13  var c=value[0];
14  var d=value[1];
15  var e=c + "," + d;
16
17  // the script will add device geocode data in last submit data row by clicking the link on confirmation page that shows up after hitting the submit button
18  // geocode data here consists of 3 columns : time to click the link, longitude & latitude and address (using reverse geocode)
19  // as long as clicking the link is done before next respondent submit button, data will be entered in the right row.
20  // however particularly for the case of multiple devices that submit data at about the same time then whichever device clicks the link closer to the last submit row timestamp, their
21  // leaving geocode column in the row above empty. In this case the geocode data will be in red font
22  // If sometime later another device click the link then the geodata will be entered in closest missing geodata row. The data will also be in red font
23  // Therefore for red font data you may want to check manually after completion for correct geodata entry. In the questionnaire add question about address to help checking.
24
25  if (respSheet.getRange(1,numColumns).getValue()=="GeoAddress") {
26
27
28  //fill data for second respondents onwards no missing geo data
29  // time here is Jakarta, you may need to change time to your local time (in GMT)
30
31  if (respSheet.getRange(numResponses,numColumns-2).getValue()==" && respSheet.getRange(numResponses-1,numColumns-2).getValue()!="") {
32    respSheet.getRange(numResponses,numColumns-2).setValue(Utilities.formatDate(new Date(), "GMT+7", "MM/dd/yyyy HH:mm:ss"));
33    respSheet.getRange(numResponses,numColumns-1).setValue(e);
34    var response = Maps.newGeocoder().reverseGeocode(value[0], value[1]);
35    f= response.results[0].formatted_address;
36    respSheet.getRange(numResponses,numColumns).setValue(f);
37  }
```

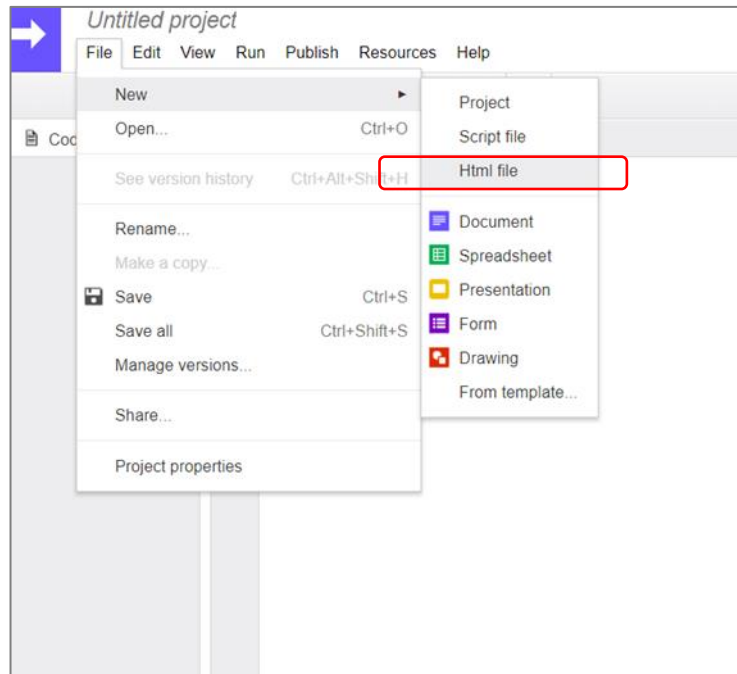

This project is published

How to Create Geocode Link

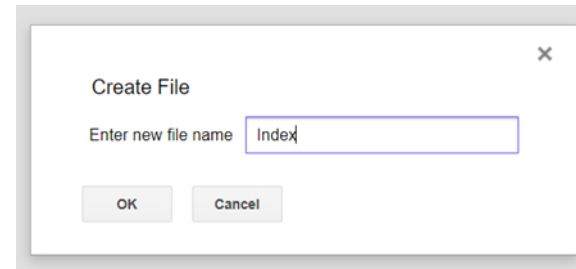

4. Create `Index.html`

- Create html file and name it Index

In File > New > Html file

Create File > Enter new file name `Index`

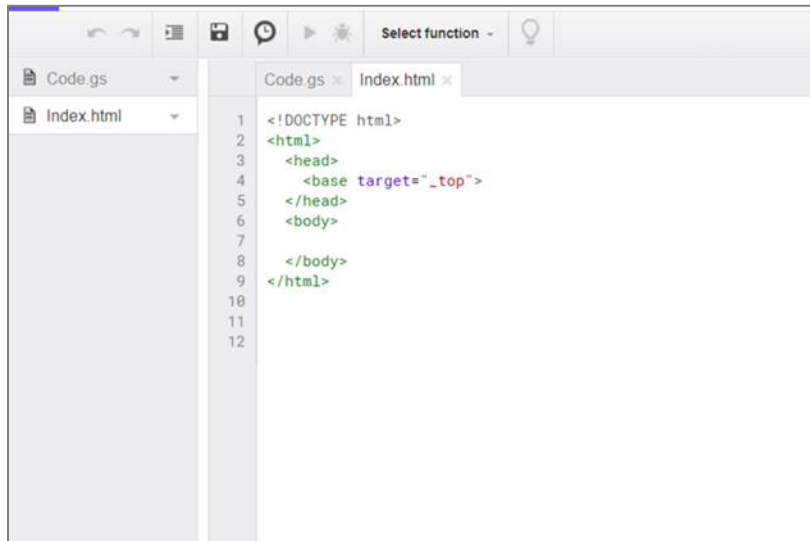

How to Create Geocode Link

5. Copy and Paste script to Index.html

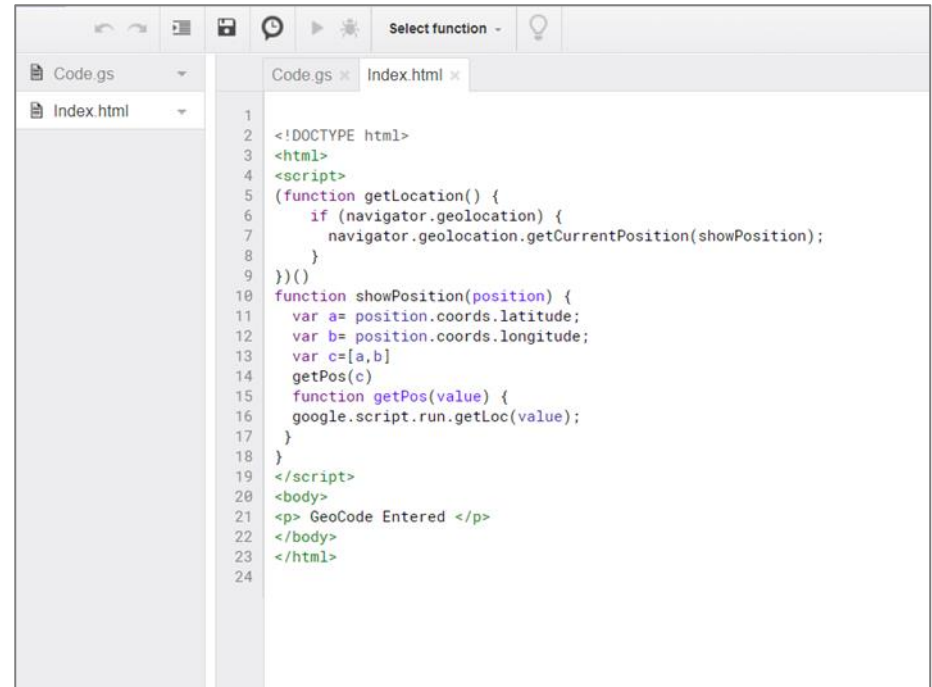

- Copy script for Index.html from Appendix

First delete default script in Index.html

```
1 <!DOCTYPE html>
2 <html>
3 <head>
4   <base target="_top">
5 </head>
6 <body>
7
8 </body>
9 </html>
10
11
12
```

Copy the script. Paste it.
Now Index.html will look like this

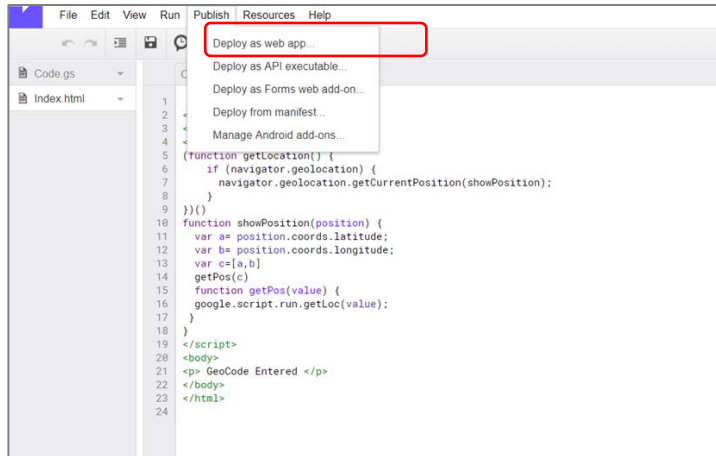

```
1
2 <!DOCTYPE html>
3 <html>
4 <script>
5 (function getLocation() {
6   if (navigator.geolocation) {
7     navigator.geolocation.getCurrentPosition(showPosition);
8   }
9 })()
10 function showPosition(position) {
11   var a= position.coords.latitude;
12   var b= position.coords.longitude;
13   var c=[a,b]
14   getPos(c)
15   function getPos(value) {
16     google.script.run.getLoc(value);
17   }
18 }
19 </script>
20 <body>
21 <p> GeoCode Entered </p>
22 </body>
23 </html>
24
```

How to Create Geocode Link

6. Go to Publish > Deploy as web app

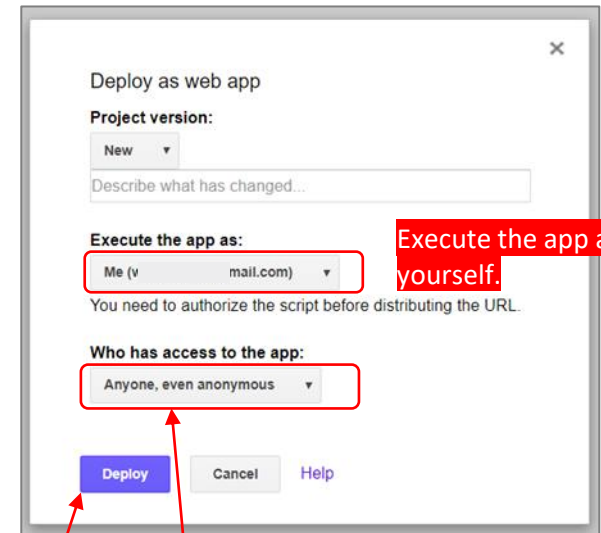

Go to Publish > Deploy as web app

If you prefer give it a project name otherwise keep it Untitled

Set Who has access to Anyone, even anonymous so everyone that has the link can use the app without log in to google first.

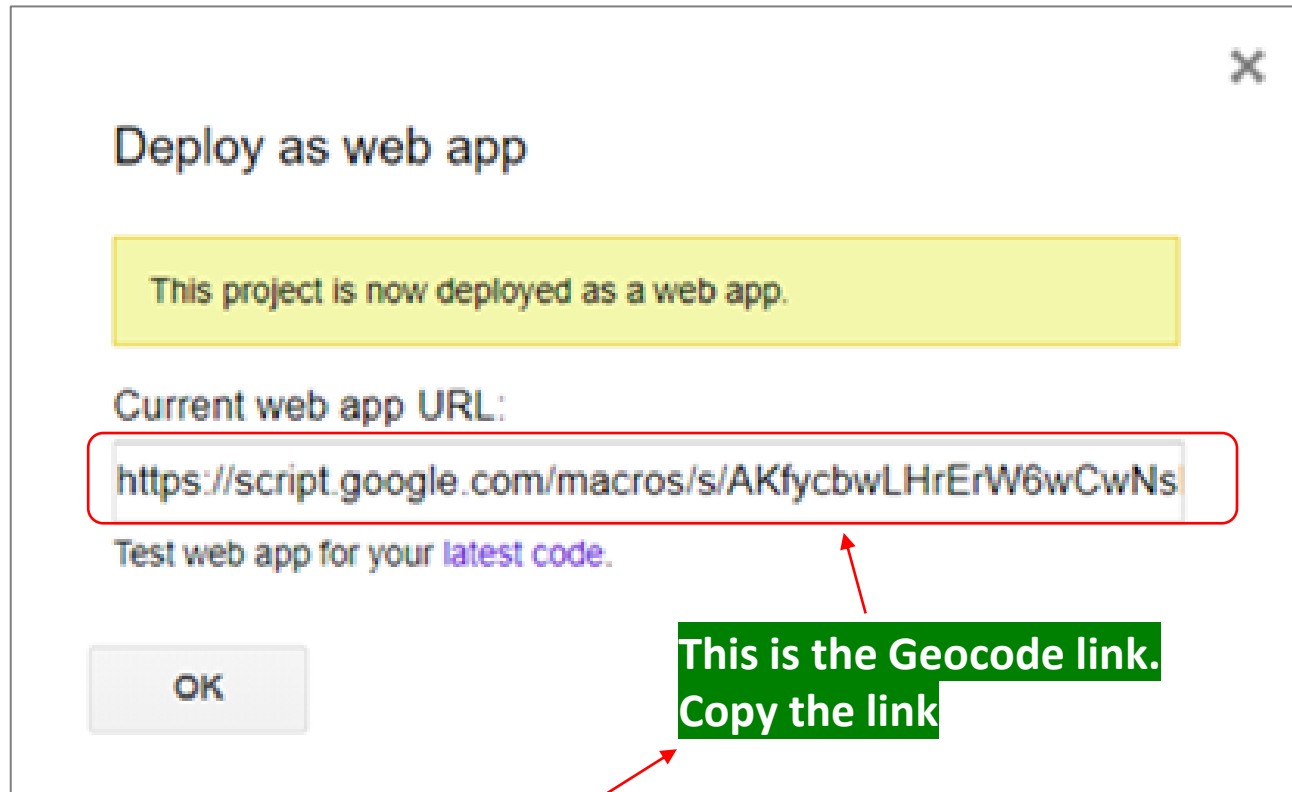

Execute the app as yourself.

Important : Access to anyone, so that everyone who has the link can use the app.

Then click Deploy.

How to Create Geocode Link

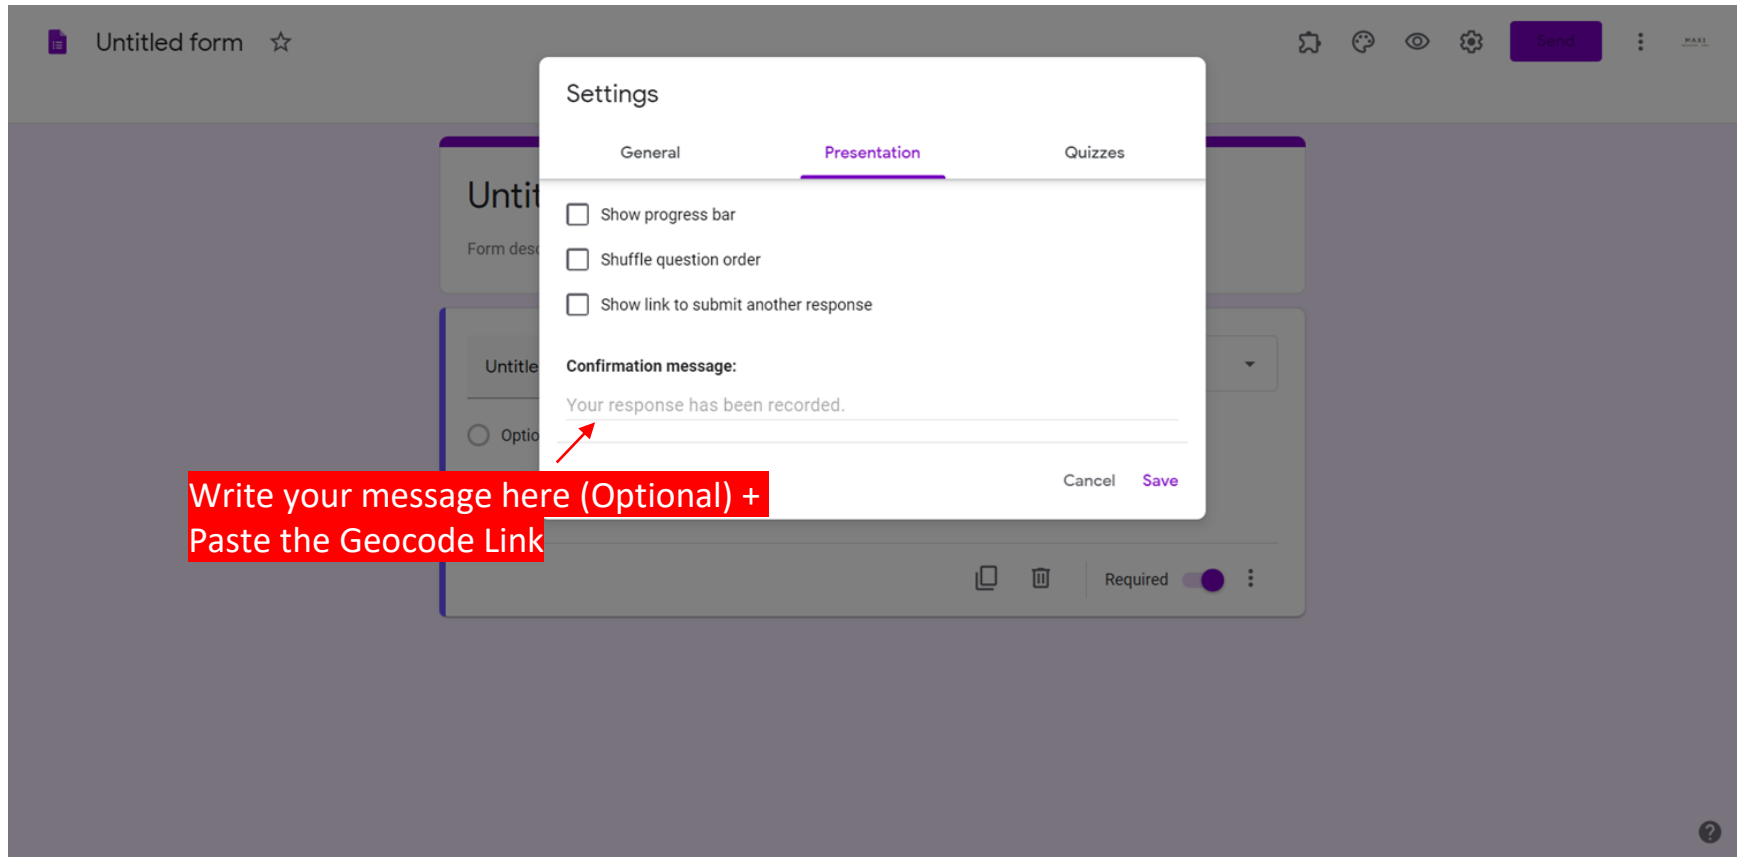

7. Now you have the Geocode link. Copy the link

The link is 'file bound' meaning that the link is unique to this form. It will not work for other form
So for new form you will need a new link for the form, just repeat the process

How to Create Geocode Link

8. Paste it on Confirmation Message

The screenshot shows a form builder interface with a 'Settings' dialog box open. The dialog box has three tabs: 'General', 'Presentation', and 'Quizzes'. The 'Presentation' tab is selected. Under the 'Confirmation message' section, there is a text input field containing the default message 'Your response has been recorded.'. A red arrow points to this field, and a red text box is overlaid on the image with the text 'Write your message here (Optional) + Paste the Geocode Link'. The background shows a form titled 'Untitled form' with a 'Send' button and various settings icons.

Settings

General **Presentation** Quizzes

Show progress bar

Shuffle question order

Show link to submit another response

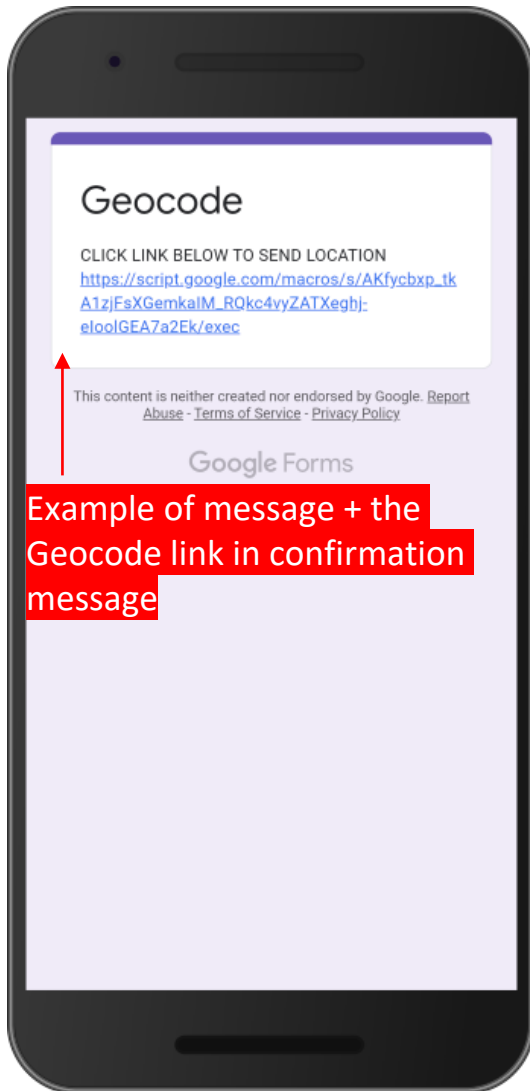

Confirmation message:

Your response has been recorded.

Cancel Save

Write your message here (Optional) +
Paste the Geocode Link

Geocode for Google Forms is now Ready

Geocode is now ready

Remember that the link is only applicable for the form where the link is created.

For other form you have to create a new different link, just repeat the process.
